

# I-SEAMORE

## SURVEY

# SHAPING THE FUTURE OF EU MARITIME SECURITY

## Main Focus

Help shape the future of border surveillance technologies by taking the I-SEAMORE Survey on Citizen's Awareness and Acceptance of EU Maritime Security Systems

## Why Participate?

- **Your Voice Matters:** Help design better, safer maritime systems.
- **Influence Policy:** Guide real improvements in EU maritime operations.
- **Balanced Solutions:** Support security while protecting human rights.

**TOGETHER, WE CAN CREATE SAFER SEAS!**

**TAKE THE  
SURVEY  
NOW!**

## What is I-SEAMORE?

The I-SEAMORE project aims to revolutionise maritime security across the EU by implementing advanced systems that improve awareness, detection, and response at sea. These systems address both security and humanitarian challenges in line with EU values and international legal frameworks.

Funded by the Horizon Europe Programme (Grant Agreement No. 101073911), I-SEAMORE strives to enhance the situational awareness and operational capabilities of European Authorities for maritime surveillance operations.

## Why it matters?

Each year, thousands of lives are lost at sea due to unsafe migration routes and criminal activities such as smuggling. Meanwhile, the EU faces growing challenges at its maritime borders, balancing the need for security with humanitarian responsibilities.

I-SEAMORE seeks to provide solutions that can:

- Enable early detection and prevention of criminal activities, including human trafficking and smuggling.
- Facilitate prompt intervention during emergencies, especially for vulnerable individuals.

## The importance of diverse perspectives in security system development

Effective and ethical maritime security systems cannot be developed in isolation. Incorporating diverse perspectives – from policymakers to end-users, from human rights advocates to technology developers – is essential to ensure these systems are:

### Useful

Practical and effective for all stakeholders, especially those at risk.

### Relevant

Aligned with security, humanitarian needs, and legal frameworks.

### Sustainable

Designed for long-term impact, beyond just security.

### Owned

Developed through collaboration, reflecting shared EU values.

By following these principles and engaging with a diverse group of voices, I-SEAMORE develops systems that are technologically advanced, ethically sound, and respectful of fundamental rights.
